

iVest

A community-investor
directed DAO

Initial, Max Supply: 1 billion iVest tokens

Liquidity: 85% (850M iVest tokens)

DAO: 10% (100M iVest tokens)

Promotions: 5% (50M iVest tokens)

Grassroots Fair Launch. No Pre-Sale, No Dev Tokens, No ICO, No Referrals. Launched with 100% community donated liquidity.

“Vesting Driven, Antifragile,
Deflationary Token
Ecosystem”

DAO

The iVest DAO is a bootstrapping web3 powered decentralized community equity & investment ecosystem.

We combine hybrid DAO governance and unique tokenomics to fuel our community and uplift profitable investment ideas.

Our approach offers exciting exposure to diverse yield opportunities, without the morale hazard and conflict of interest of so many recent CeFi and DeFi failures.

OUR PROCESS

Our network vertically integrates many distributed cryptocurrency operations and reinvests the proceeds into our community by tokenizing profits, sharing decision-making, and granting capital to leaders, traders, and powerful ideas through our governance.

Members passively earn more tokens for holding and may participate in engagement, educational and trading programs, as well as social media activities. Excited members may become *Contributors* by donating their time, energy, expertise, and funds to the DAO.

Everyone earns ‘*karma*’ points for their efforts and these points can be exchanged for a share of iVest tokens collected by the DAO.

TOKENOMICS

The iVest governance token benefits from an antifragile, deflationary economic design.

Burning and Liquidity dynamics combine with our Vesting schedule to increasingly collateralize our liquidity pool.

iVest collected from transactions and from DAO related activities are shared as rewards to token holders and DAO contributors.

Our tokenomics creates conditions such that only a smaller, variable fraction of total supply is unlocked ("fully vested") and available to be sold at any particular moment. These are excellent incentives for bullish supply shocks and long term price appreciation.

THE MISSION

iVest's mission is to create a decentralized community equity & investment ecosystem. A tokenized group which creates relatively safe, compounding growth opportunities for holders of the cryptocurrency token.

The cryptocurrency market is ready for a disruptive new project such as iVest. The development of DeFi and Web 3.0 protocols means our kind of project is only recently possible.

iVest ADVANTAGE

Uniquely, iVest innovates a method of time-lock "vesting" rewards and incentives which combine to squeeze circulating supply while increasing the marginal value of all coins on the network. The net-effects being long-term appreciation, resilience and scalability.

By staking their tokens, users can increase their voting power and participation in the platform's liquidity streams, providing a tangible benefit to those actively engaged in the ecosystem.

These dynamics create active and passive cash flow for the iVest network. Providing passive rewards to token holders, funds for DAO contributors, iVest price appreciation, increased liquidity and other rewards to **you** - instead of traditional stakeholders.

We believe iVest will prove to become a recognizable brand and create outstanding value for its members and the greater cryptocurrency community.

GOVERNANCE

iVest's ecosystem empowers holders to participate from the sidelines or increasingly engage as community members and contributors, earning valuable rewards in the process.

Our DAO governance enables us to source new ideas and recruit promising influencers, traders, and other contributors directly from the community. Through the iVest DAO, members have the ability to propose and vote on various governance proposals, including protocol upgrades, fee structures, ecosystem expansion, and more. This democratic approach ensures that the collective voice of the community shapes the direction of the project.

Appointed and elected roles are created to carry out day-to-day activities and other necessary duties.

We aim to create a vibrant and self-sustaining ecosystem where holders can choose their level of engagement with the community and be rewarded proportionally. By leveraging the power of the DAO model, we enable decentralized decision-making, aligning the interests of all stakeholders and fostering a community-driven approach to financial empowerment.

iVest DAO Participation Tiers:

Holder/Member: Anyone who holds iVest tokens is considered a **Member** of the DAO

and may vote on community *polls* and *proposals*.

General Contributors: Members who contribute efforts or liquidity via our PancakeSwap Liquidity Pool (LP) may draft *polls* and *proposals* for Members to vote on and participate in. These **Contributors** are also eligible for DAO appointments and elections. They also earn a share of LP fees.

Community Leaders: Popular and helpful Contributors may be promoted by our members into **Community Leader** roles and appointments. These positions come with extra responsibilities but also earn a larger share of network revenues as consideration for their participation.

VESTING POOL, FEES

iVest transactions follow our unique Vesting and fee schedule. This proceeds in the following way:

1. You receive 50% of your tokens immediately.
2. The remaining 50% are "Vesting", gradually unlocking over 30 days.
3. Hold your iVest tokens and continue earning passive token rewards and voting rights.

A 10% transaction fee is collected on Buy and Sell volume. This fee allows the network to operate, fund Vesting rewards, and incentivize DAO participation.

- 3% Vesting reward to holders,
- 3% Locked for liquidity,
- 3% DAO funding,
- 1% Burn

The combined effects of the Vesting and fee schedule promotes an antifragile, deflationary ecosystem.

Buyers passively earn more tokens while iVEST circulating supply dwindles...

Sellers wait for locked tokens to exit their position smoothing price action, limiting dumps, panic & manipulation.

In this way, the Vesting schedule entitles you to earn a variable rebate. Paying the Vesting fee now entitles you to your share of all future Vesting fees collected. Our tokenomics can make this rebate really count and during high-volume periods may generate significant profits on top of covering fees.

The larger your share of all circulating tokens at any moment – the more iVest you will collect on every transaction. This encourages dollar cost averaging (DCA) and creates an emergent self-rebounding

'buy-the-dip' incentive to claim outsized Vesting rewards.

Other iVest Innovations:

Dapper Whales: To promote iVest network health, good-will, token velocity and appreciation; our largest holders donate an additional 3% when buying or selling. Of which, half are shared with the community through Vesting rewards and half are burned. This specifically recycles value from large holders and windfall early adopters to the broader community.

Buy-The-Dip: Bonus Vesting rewards are largest when selling pressure is high. Increase your yield by buying the dip or holding through selling.

Liquidity Shield: The Liquidity Shield smart contract removes iVest tokens from circulation, waiting to be paired with BNB coins generated from revenues and network activity. Strategically, these funds are added back to the Liquidity Pool at the current iVEST/BNB ratio, stabilizing price or increasing the collateralization ratio.

Deflationary Valve: The Liquidity Shield may occasionally deflate iVest tokens from circulation. Like a burn, this reduces the number of non-custodied tokens in circulation or existence, which increases upward price pressures.

OPERATIONS

The iVest charter mandates the DAO upcycle a plurality of its fees into revenue generating operations, some listed below:

- Mining and PoS nodes
- Yield Farms, DeFi loans and lending
- Proprietary Trading Desk operations
- Venture Investment opportunities
- Community and retail products sales & subscriptions:
 - Discord, Telegram, SM subscriptions
 - Live stream, Q/A donations from Youtube, Twitch.
 - Educational products
 - Trading signals, software
- DAO related fees.
 - Transaction and platform fees
 - Registration, prop trading challenge fees. DAO good standing and proposal dues, etc.
- Collaboration and promotional events
 - Charity, community service.
 - iVest Members groups, parties, occasions, and events.

Members of the iVest DAO can become a *Contributor* or *Community Leader* by participating or promoting the iVest DAO in any of its endeavors.

Contributors who are active within the iVest DAO ecosystem, either through contributing resources, volunteering time, ideas and advice, etc will **earn 'karma' a social credit**. Contributors with higher *karma* will earn a larger share of ecosystem rewards.

TIMELINE, GOALS, MARKET CAP

Our community has identified 4 distinct tiers of development for our DAO. While each stage presents its own challenges and opportunities, we expect to spend at least one to two years at each level, according to the needs of the iVest network, stakeholders, and the sentiment of crypto markets in general.

<i>tier</i>	<i>development focus</i>	<i>market cap</i>
1	Community Ecosystem	\$250k - \$1M
2	Defi Prop Firm	\$1M - \$10M
3	Education. Outreach	\$10M - \$25M
4	Crypto Venture Firm	\$25M - \$100M+

Launch

At launch, **the iVest DAO will mint 1 billion iVest governance tokens**. No more tokens can ever be created.

In consideration of its donated assets, liquidity, IP, brand, and other commitments: iVest DAO estimates its enterprise value at \$200,000 USD or \$0.0002 per iVest token.

Its initial, **fair launch price will be ~\$0.0001** per iVest token, which may be an attractive valuation to early adopters.

CONCLUSION

iVest has developed its own edge in the following manner:

1. Eliminate the morale hazard of traditional reflection tokens, yield products.
2. Embrace emergent solutions from proper incentives.
3. Implement on-chain community infrastructure.
4. Create unique tokenomics to reward good-faith participants.
5. Take action to generate revenue and volume fostering compounding, organic growth.

Our antifragile, deflationary tokenomics support a healthy ecosystem where:

- There will be fewer tokens tomorrow than today.
- Every transaction creates upward pressure on the token price, and
- Buyers maintain control.

Our ecosystem provides a superior experience and market advantage vs current CeFi and DeFi offering, creating the opportunity to secure a large and growing share of the DeFi marketplace.

Many competent cryptocurrency enthusiasts seek out funding from firms like TopStep and FTMO or they join larger communities which return very little alpha. Instead, iVest can retain these people in our own ecosystem via our DAO and DeFi trading infrastructure.

It's a win-win as we collect audition fees and revenue generated by an energized, vetted group of outsourced traders.

We are leveraging our unique tokenomics with proper community incentives to create a framework that will compound our abilities and expertise regarding markets, trading, and asset management.

We see our **brand values** of being helpful to the group, honesty, self-education, forward thinking, financial literacy, stoicism, and dressing well (or '*dapper*' as we call it) align very well with our community.

Finally, holders of the iVest governance token may experience significant windfall profits should we achieve our goals. Interested? You can help support the community and secure your tokens by participating in our grassroots fair launch.

Learn more about the iVest DAO at www.iVest.finance.

“We aim to become a Top 100 blockchain project. In doing so, the iVest DAO may become a bespoke platform for aspiring proprietary traders, reciprocal partnerships with other projects, and cryptocurrency education.”

HOW TO BUY

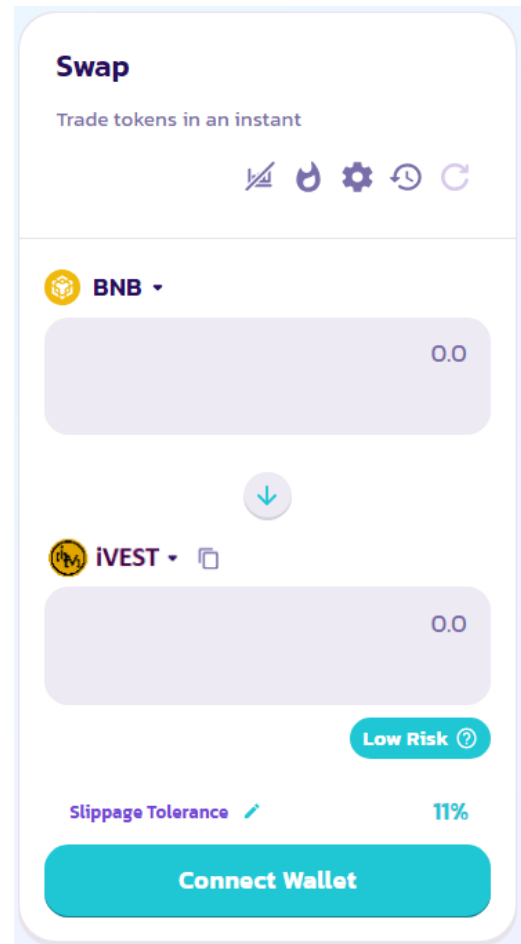

As a grassroots, fair launch DAO token, there will be no free Dev tokens or pre-mines or referral gimmicks. The iVest governance token will launch and begin trading on PancakeSwap.Finance at a random date and time during a pre-announced launch window. Follow our social media, Discord, Telegram, and Twitter to hear it first!

 \$1546    BNB Smart Chain 

1. Connect your BNB wallet to PancakeSwap.Finance/swap
2. Use the SWAP tool to trade BNB for iVest tokens.
3. If iVEST doesn't automatically appear use the **CONTRACT CODE: 0xTBD**
4. Set **Slippage Tolerance to 10-12%**
5. Hit BUY!

Congratulations, that's it! You're now a member of the iVest DAO and a certified holder of the iVest token. Please remember that according to vesting rules of the DAO you will receive 50% of your post-fee tokens immediately after purchase.

<i>wallet title</i>	<i>tokens held</i>
Royal Whale	40,000,000
Dapper Whale (Top 1%)	10,000,000
Whale	1,000,000
Shark	500,000
Dolphin	250,000
Crab	50,000

PURCHASING RULES

The iVest ecosystem has implemented the following purchasing rules to ensure good faith participants have the best experience.

- Maximum purchase: 1% of total supply (10,000,000 tokens)
- Maximum wallet size: 4% of total supply (40,000,000 tokens)
